

Musical Gears

Draw and cut out pictures of gears. You will need one less gear than number of robots that will be playing.

Lay the gears out on the floor, forming a large circle.

Play music and have the robots drive around the perimeter of the gear circle using a remote.

When the music stops, everyone must immediately drive their robot to an available gear.

The one person left not on a gear is out.

Remove a gear and continue until only one robot is left.
